GIT REPO: GEBREALIEF / FINAL-WAP-PROJECT

#### Contents

- ▶ Project objective
- ▶ Technologies
- ▶ Project use cases
- ► Implementation
- ▶ challenges we faced

#### Project objective

The main objective of this project is

- ▶ To provide a user friendly and easy to use shopping experience to the users.
- ▶ To make it easier for the product owners to add products and maintain.
- ▶ To make searching products easier for both shoppers and product owners.

#### Technolgies

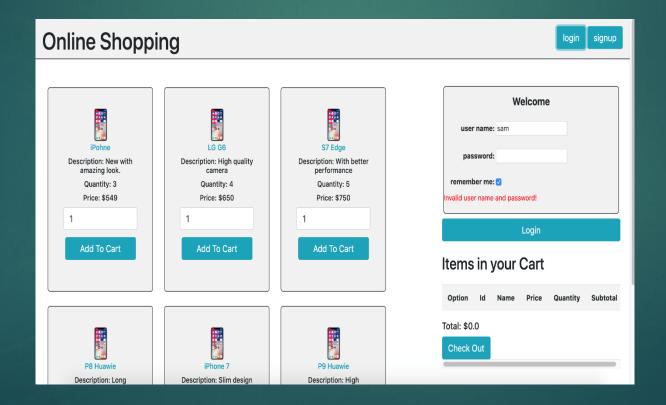

- ▶ Clientside technologies
- ✓ Html,Css
- Java Script(Jquery, Ajax)
- ► Serverside side technologies
- √ Java
- ✓ Servlets
- ✓ Jsp

#### Use cases

- ▶ Log in
- Signup
- ► Add product
- ► Check out

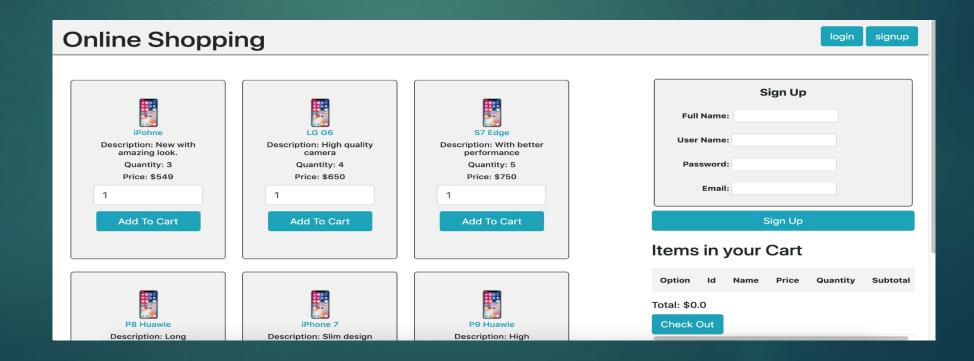

#### Log In use case

Anyone can view Online Shopping portal and available products, but every user must login by his/her Username and password in order to purchase or order products.

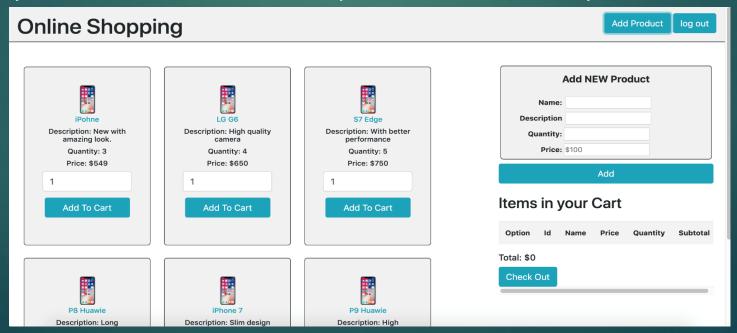

#### Sign up use case

- Unregistered members can register by navigating to registration page.
- After the user registers we navigate them to the login page where they will enter their username and password and login.

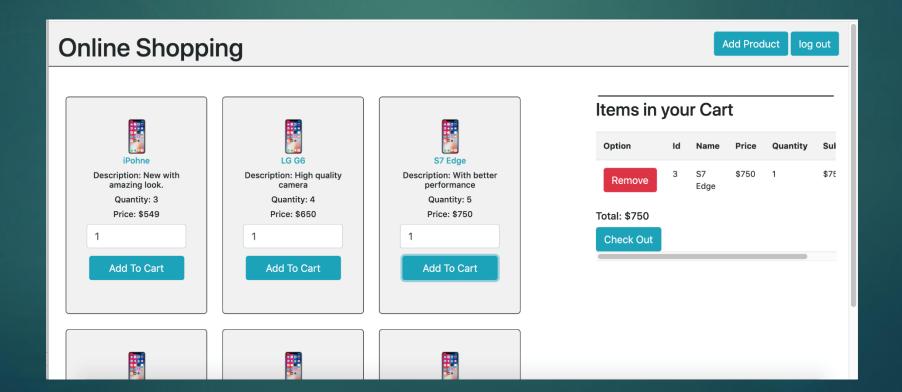

#### Add product

- Only Admin will have access to modify roles, by default developer can only be an 'Admin'.
- ▶ The admin clicks on add product button and the add product information section of the page will be loaded asynchronously.
- ▶ Admin only will be able to add products to the product list.

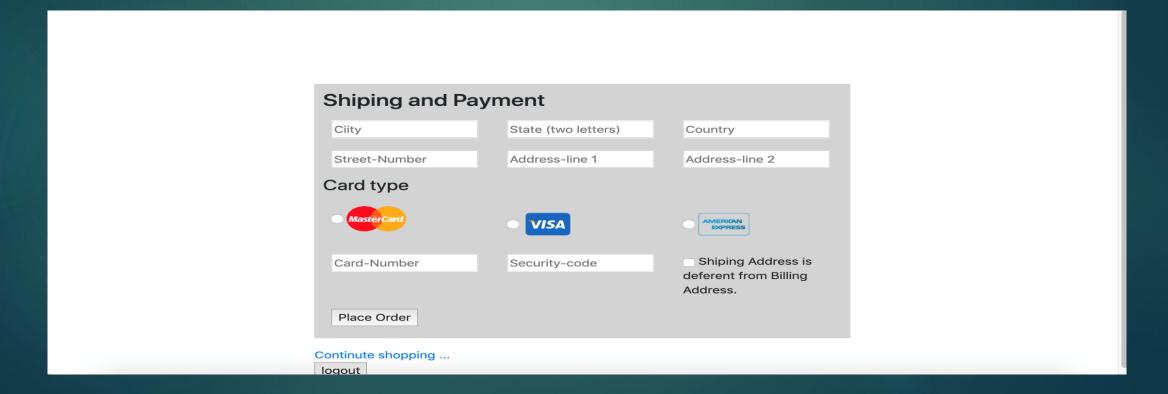

#### Add to cart

- ▶ Once a user Is logged in then she/he can put products to their cart and by pressing the add button on each product.
- ▶ The added items will be shown under the items on your cart section.
- ▶ All the item prices will be added and displayed on the bottom as total:

#### Check out

- Once the user decided which products to buy then they can check out by pressing the checkout button.
- ▶ It will redirect them to the checkout page which asks for their shipping address and payment information.

## sample page implementation(sign up ajax request)

```
function loadSignUpPage (evt) {
   $('#add-prouduct').find("*").remove();
   $.ajax("signup", {
        $('#add-prouduct').html(data);
function sendLoginDetails(evt) {
    }).done(successLoginDetail).fail(successLoginDetail);
```

#### challenges we faced

- Issues with intellij Idea and tomcat being inconsistent and caching information
- ▶ Ajax request issues which we asked fellow class mates and get a solution for.

### Thank you!!!
